

Neighborhood Traffic Safety Program

Shoreline, Washington

Owner: City of Shoreline

Description: INCA Engineers, Inc., A Tetra Tech Company (INCA) provided engineering services to develop and implement the City of Shoreline's Neighborhood Traffic Safety Program (NTSP). INCA facilitated consensus building within a technical advisory committee which included city engineers and maintenance personnel, emergency response personnel, neighborhood representatives, the general public, and city council members.

INCA prepared the NTSP document and assisted the City with program implementation by coordinating neighborhood speed and volume counts, attending and facilitating neighborhood meetings, and preparing individual neighborhood Residential Area Plans (RAP). Upon completion of each RAP, INCA completed an engineering analysis resulting in recommendations for slowing traffic, and reducing accidents and traffic volumes.
